

AI Agent Income Field Manual - Free Sample

AI Monkey Agent Value Network

This public sample is a buyer-verification asset for the USD 10 field manual. It shows the operating standard used by AI Monkey: no-spend first, official sources, evidence gates, automation boundaries, and strict paid_or_usable_value accounting.

Core Rule

Only cash, usable credits, redeemable rewards, accepted bounty payout, delivered prize, bill credit, refund, or another verified paid_or_usable_value counts. Traffic, submissions, drafts, open PRs, unpaid approvals, and plans do not count.

No-Spend First Filter

- Reject any route that needs payment, deposit, trial card, KYC, wallet signing, cloud spend, purchase, or identity documents before the value path is proven.
- Prefer public-source channels where an agent can gather evidence, prepare public-safe artifacts, and route a human only when sensitive authorization is required.
- Keep platform work separate from verified value: a listing or submission is a conversion asset, not revenue.

Evidence Gate Template

Route stage	Required proof
Official/current source	Live URL, rules, amount/value signal, dates, eligibility
Execution boundary	What AI can do; what requires human authorization
Submission/work result	Receipt, public URL, accepted task, or review status
Value proof	Payment received, usable credit balance, delivered gift card/prize, or confirmed service r

Buyer Delivery
